- ▶ Record Web TV, Facebook and YouTube streams
- ▶ Transport Stream (TS) Snapshots
- ▶ Storyboard
- ▶ Audience Analysis now in HTML5
- ▶ XMediaPlayer
- ▶ Website Recording, Web Archiving

#### Record Web TV, Facebook and YouTube streams

XENTAURIX now features the ability to record Web TV streams, including Facebook live and YouTube and is ideally suited for your social media streams. This new Web TV capability is available for on-premise installation or via the XENTAURIX Cloud service.

#### Transport Stream (TS) Snapshots

XENTAURIX now supports original high quality Transport Stream (TS) "image snapshots", taken from your high quality Transport Stream. This allows images to be repurposed and published to media distribution platforms in minutes using the simple to use HTML5 XENTAURIX user interface.

### **Storyboard**

XENATURIX storyboard now features colour coding for time of day and display intervals from 5 seconds (previously 30 seconds), providing very granular content viewing and playback capabilities. XENATURIX storyboard also features multiple side-by-side channel comparison to quickly locate and playback content from multiple channels.

### **Audience Analysis now in HTML5**

XENATURIX now features all the audience analysis capabilities within the HTML5 interface, including viewer ratings for channel, target group comparison, viewer migration, viewer distribution, viewer demographic grouping and graphical program pie charts. The HTML5 user interface allows user configurable customised panels to view the items that are specifically of interest to your department. XENATURIX audience analysis operates with GFK, Nielsen and other suppliers of audience viewing statistics.

### **XMediaPlayer**

XMediaPlayer is designed for media monitoring departments, offering live and VOD playback monitoring and review services. An operator is able to view 6 channels simultaneously with 16x FF (Fast Forward) and 10x RR (Rewind) with instant replay and review to create clips for repurposing and publishing to media distribution platforms.

### **Website Recording, Web Archiving**

XENATURIX now offers the ability to record and archive complete websites, including all subpages or specified webpages. This new feature is primarily utilised by news and social media sites to maintain a recording of their news and story updates. The recording cycle is adjustable by the XENATURIX scheduler to take timed based snapshots, for example every 5 minutes, 1 hour, 24 hours etc. The XENATURIX HTML5 Player allows users to select the recording time and browse through the webpages normally in a replay mode.
